

Date: _____

File No: _____

Range Impact Assessment

Range Tenure Holder: _____ RAN #: _____

Range Unit: _____ Pastures: _____

Timber Licensee: _____ Contact: _____

CP/BLK/OPENING #: _____

Type of Conflict:

- Range Barrier loss
- Range Development
- Community Watershed
- Other _____
- Harvest (Season)
- Riparian/Water concern
- Recreation
- Road Traffic
- Safety
- Wildlife Habitat

Description of Incident / Issue: (include map) _____

Potential Actions

- Fence Construction Length (m) _____ Type _____
- Grass Seeding (ie: landing, skid trail, block)
- Recreation monitoring
- Corral Construction
- Water Development
- Riding Frequency Increase
- Natural Material Fencing (slash barrier)
- Cattle-guard required
- Road Deactivation
- Invasive Plant Management
- Pasture Consolidation
- Common Range Creation
- Range Rider Implementation

Measures to Address Conflict (include target completion date): _____

Range Impact Assessment

The purpose of this form is to create open communication between Range Agreement holders and Timber Licensees.

Form Process Summary

- 1) Form provided to record outcome of breach of barrier discussion and other potential impacts.
- 2) Timber licensee and range tenure holder fill out form.
- 3) Timber licensee retains form, Range licensee retains form and a copy is forwarded to District Range Agrologist.
- 4) Timber licensee applies for appraisal allowance to address Range Impact as identified on form.
- 5) Timber licensee applies to District for authority to construct fencing
- 6) If action plan does not include fencing or is not covered under appraisal, alternative options, such as the Mountain Pine Beetle funding, can be discussed with your District Agrologist.

Integrated resource management's goal is the co-operation of resource interests, while achieving sustainable development, for the economic, social and environmental benefit. Ministry of Forests and Range (MOFR) will play a supporting role in addressing issues under the new Forest and Range Practices Act (FRPA), rather than leading role, as was under Forest Practices Code. Communication between timber licensee and range tenure holder will ensure meeting the goal of integrated resource management.

Due Diligence

Under FRPA, Crown resource users are expected to put consideration of impact on other land users into their planning. The land user has to keep potential negative repercussions of their actions in mind, for example: riparian zone issues, plantation damage and fence maintenance.

The licensee needs to question:

- Do you foresee any negative impacts due to your actions?
- Is sufficient care being exercised to prevent conflict?

Documentation of due diligence is advisable and can include: communication, precautions taken, relevant training of staff, meetings and interactions with other resource users.
