Cerbel Funnel Seeding Spring 1984

Officer i/c: D. Skiperen

Location: Kamloops - various locations

Region/District or Nursery: Kamloops/Various

Objective: To test the use of direct seeding using Cerbel Shelter Funnels as another method of establishing direct seeding installations.

Progress: The first part of this trial (germination) shows promise. Results of 86% germination on area where 3 plantations failed. The Cerbel funnel has achieved better control against rodents.

Report Distribution: Silviculture Branch Library
Silviculture, Kamloops Region

Incomplete Abandoned

Low survival rate in the second year. Not a good alternative to planting on harsh sites. Rodent problems as well as trampling by livestock in open range areas.
