To: Silviculture Branch
Attention: Curt Clarke
   Sx Trial Coordinator

Re: Sx Trial Number Registration

Currently I am starting two projects that I would like registered with an Sx number. Hopefully if time permits I will be able to start a few more later on.

Project 1

Sx 862 1/3 ✓

Title: Wrapping Bareroot Interior Spruce 2+0 and Coastal Douglas-Fir 2+0 Roots with Vitafilm.

Objective: To determine if wrapping the root system of bareroot stock for frozen and cold storage is advantageous to the quality of stock after storage as well as advantageous to the wrapping and packaging segments of the overall lifting process.

Location: Surrey Nursery

Status: Trial is to be established during the winter lift 1986-87 and completed when the stock is planted in the spring of 1987.

Officer i/c: Stewart Haywood-Farmer R.P.F.

Project 2

Title: Bareroot Spruce 1 1/2+1 1/2 Multiple Tops and Rosette Buds Morphological Study.

Objective: To determine the long-term morphological characteristics of seedlings with multiple tops and rosette buds developed in the nursery.

Location: a) Kootney Lakes Forest District, Nelson Region. Exact location to be determined at a later date.

   b) Chilliwack River Nursery.

Status: Trial is to be established during the winter lift 1986-87 when the desired stock samples are prepared. The trial stock will be planted in the above locations when the sites are available.
Progress: Working Plan is being prepared.

Officer i/c: Stewart Haywood-Farmer R.P.F.

Thank you very much and I hope this information is enough.

Sincerely,

S. Haywood-Farmer
Nursery Project Officer
Surrey Nursery
