SX 87/04 C

Title: Fertilization of Spruce plantations one or more years following planting.

Officer or Technician i/c: C. Sutherland

Location: McKay River

Region/District or Nursery: Cariboo

Objective: To determine if an increase in height growth can be achieved by applying small (30 g) doses of slow release fertilizer (Osmocote: 9 months: 18.6.12) to established interior Spruce plantations 1 to 4 years of age.

Progress: Tree measurements have been taken in the fall of 1985 and 1986.

Status: Incomplete

Report and Distribution: Library, Silviculture Branch
Research Officer, Cariboo Region
Districts, Horsefly
