D) History: This unit was site prepped with the macige rotary plow in summer of 1989. Chemical site prep occurred in fall of 1989 with Vision (2.14 Kg a.i./Ha). It was then operationally planted to cottonwood with the Fdi trial established in May of 1990.

E) Method: The planted area will be staked and mapped. One hundred trees will be selected, tagged, staked, mapped and measured. Heights, RCD's, mortality levels, pest and brush concerns will be recorded and recommendations proposed.

F) Assessments:

1st assessment scheduled for spring 1992 prior to growing season. Report to follow.
