

FIGURE A9 Simulated winter snow depth at the Upper Penticton Creek Experimental Watershed under winter 2001/02 temperature and precipitation conditions (blue line) and three climate-change scenarios. The scenarios are: 2°C warming (increase to daily temperature record for winter 2001/02) with no precipitation change (purple line), 4°C warming with no change in precipitation (green line), and 4°C warming with a 10% increase in precipitation (orange line).
