

What's new Version 1.12.6

The purpose of this release is to address WASTESVC Native WebADE Conversion.

In this release, WASTESVC has been converted from implementing the WebADE Services to WebADE Taskmanager. Among the changes made, the services.xml file has been replaced with a task.xml file.

This migration is dependent on the WASTE 01_12_06 Oracle migration where the Services and UserInfo extensions preferences are to be dropped. The Task extension preference already exists for WASTE.
