**Re: The April 1, 2003, Amendment to Coast Appraisal Manual
Section 1.3.2 - Cutblocks within a Cutting Authority Area**

This April 1, 2003, Coast Appraisal Manual (CAM) amendment replaces any previous guidance on cut block blending, issued for the Coast Forest Region.

Section 1.3.2 of the CAM now stipulates that cutblocks included in a single cutting authority area must use the following criteria:

- constitute a logical unit
- must be tributary to the same “appraised” point of origin, and;
- must be within the same timber supply block

Please note, any complete cutting permit packages received before April 1, 2003, would continue under the “previous guidance” on the cut block make-up of cutting permits.

However, any incomplete packages received before April 1, 2003, and any packages received after March 31, 2003, must use the above criteria for all tenures.
