

QUICK GUIDE TO FIELD PROCEDURES

This quick guide to field procedures will remind you of the steps you should follow to use the growth intercept method in a silviculture survey. Complete instructions on using the growth intercept method are provided in the report *Growth Intercept Method for Silviculture Surveys* available from the Stand Development Forester, Silviculture Practices Branch, Victoria, B.C. (Tel) 387-1191 (FAX) 387-1467.

To use the growth intercept method to estimate site index for each stratum in an opening, follow these four steps.

1. Pre-stratify the opening:

See the Silviculture Practices Branch manual *Growth Intercept Method for Silviculture Surveys* for details.

2. For each stratum, select the site index species:

Use the leading species (inventory component) as the site index species. See the Silviculture Practices Branch manual *Growth Intercept Method for Silviculture Surveys* for more details.

3. In each stratum, collect growth intercept measurements:

a. Establish one growth intercept plot per hectare to a maximum of 10 plots per stratum. A sample grid is recommended to achieve uniform coverage of the entire stratum area. Use a plot radius of 5.64 m.

b. Select one growth intercept sample tree from each plot. Sample tree should have the following characteristics:

| | |
|-----------------------|--|
| Species | site index species |
| Age | 3- to 30-years growth above breast height |
| DBH | largest DBH |
| Stem condition | undamaged stem vigorous, uniform annual height growth above breast height |
| Crown position | dominant or co-dominant crown class not overtopped by trees or brush |
| Ring width | vigorous, uniform ring widths from pith to bark |

c. On each growth intercept sample tree:

- locate breast height (1.3 m above ground level);
- measure total tree height (m);
- determine age at breast height; and
- on the field sheet, record species, total height, and breast height age.

GROWTH INTERCEPT TABLE

Species: Interior spruce (Sw, Se)

Region: Interior B.C.

Source: G. Nigh, 1995b

| Breast height age (yr) | Site index (m) | | | | | | | | | | | | | | | |

How to use the table to get a site index estimate from measured height and age.

Step 1: Look down the breast height age column to find the row corresponding to the breast height age of your sample tree.

Step 2: Look across the row to find the total height that is closest to the total height of the sample tree.

Step 3: Look up the column to find the site index estimated by sample tree height and age.

| 26 | 12.2 | 12.8 | 13.4 | 14.1 | 14.7 | 15.3 | 15.9 | 16.5 | 17.1 | 17.7 | 18.3 | 18.9 | 19.5 | 20.1 | 20.7 |
| 27 | 12.6 | 13.3 | 13.9 | 14.5 | 15.1 | 15.8 | 16.4 | 17.0 | 17.6 | 18.3 | 18.9 | 19.5 | 20.1 | 20.7 | 21.4 |
| 28 | 13.1 | 13.7 | 14.3 | 15.0 | 15.6 | 16.3 | 16.9 | 17.5 | 18.2 | 18.8 | 19.5 | 20.1 | 20.8 | 21.4 | 22.0 |
| 29 | 13.5 | 14.1 | 14.8 | 15.5 | 16.1 | 16.8 | 17.4 | 18.1 | 18.8 | 19.4 | 20.1 | 20.7 | 21.4 | 22.1 | 22.7 |
| 30 | 13.9 | 14.6 | 15.3 | 15.9 | 16.6 | 17.3 | 18.0 | 18.6 | 19.3 | 20.0 | 20.7 | 21.4 | 22.0 | 22.7 | 23.4 |

How to use the table to get a site index estimate from measured height and age.

- Step 1: Look down the breast height age column to find the row corresponding to the breast height age of your sample tree.
- Step 2: Look across the row to find the total height that is closest to the total height of the sample tree.
- Step 3: Look up the column to find the site index estimated by sample tree height and age.

Step 1: Locate breast height

Step 2: Measure total height

Step 3: Determine breast height age by one of two methods

1. fell tree and count rings

4 years old

2. count rings on increment core

4 years old

Step 4: Record species, height, and age on field card

| Plot no. | Species | Total height (m) | Breast height age (yr) |
|----------|---------|------------------|------------------------|
| 1 | Sx | 3.1 | 4 |

4. For each stratum, calculate the average site index:
- For each sample tree, look up site index in the Growth Intercept Table based on total height and breast height age; and
 - Average the site index values from all plots in the stratum.
