FS 658 2008/3/18

Well spaced/free growing age and height sample data is recorded for the representative well spaced/free growing tree within plots, (approx. 1 per 4 plots, min. 3 per stratum), then mathematically averaged.
Inventory label data is collected periodically, (approx. 1 per 4 plots, min. 3 per stratum), from visual observations throughout the stratum, then 'roughly averaged' to represent the stratum.
